Admissions Data: Report on the total number of newly matriculated students in public health degrees in AY 2022-23.

- Quantitative Faculty Resources: Report on the number of faculty currently teaching in the fall 2023 term.

- Graduation rates:
  - This question asks you to think about ALL the students who enroll each AY as a cohort.
  - We want to know about the graduation rate for the most recent cohort to reach their maximum allowable time to graduation.
    - That means, unless you allow 1 year to graduate, you will not report on any students who matriculated into your program in AY 2022-23.
  - So which "AY cohort" will you report on?
    - This will differ for each school and program and may even differ between degrees because it depends on how many years you allow students to complete their degree.
  - For example, if MPH students are allowed 5 years to graduate, you will report only on students who matriculated in AY 2018-2019. And if you allow DrPH students 10 years to graduate, you will report on everyone who matriculated in AY 2013-2014.

- Post-Graduation Outcomes:
  - This question asks you to think about ALL the students who graduated in a single year without attention to when they matriculated into your school/program.
  - We want to know about the placement data for the most recent group of graduates who have had 12 months to secure employment or continuing education.
  - In the 2023 report, for example, you should report on every student who graduated in the 2021-22 academic year, since they reached the 12-month post-graduation mark in 2022-23—the reporting year for the annual report.
